*The maximum electric power output was determined in accordance with UN-GTR.21 and is available for a maximum of 30 seconds. The power available in the individual driving situation depends on variable factors such as the outside temperature, temperature conditions, state of charge, conditioning state or physical ageing of the high-voltage battery. Availability of maximum power output requires in particular a high-voltage battery temperature between 23 °C and 50 °C. This pricelist was issued in September 2026.

Technical Data

Maximum AC Charging power	11kW	11kW	11kW
Maximum DC Charging power	90kW	105kW	105kW
PERFORMANCE			
Max. speed (km/h)	160	160	175
Acceleration 0-100 km/h**	9,9	7,1	6,8
ELECTRIC CONSUMPTION			
Electric consumption combined WLTP (kWh / 100km)	13,8 – 15	13,6 - 14,8	13,8 - 16,2
Electric range WLTP (km)	328 - 305	446 - 413	440 - 379

The Technical data may differ according to the level of equipment.

The specified power consumption and range values are the official figures obtained from tests under standardised EU test conditions in accordance with the Worldwide Harmonized Light Vehicles Test Procedure (WLTP), a more realistic test method for measuring power consumption (kW/100km) and range (km). WLTP replaces the previous NEDC test method. The above values reflect the standard vehicle excluding additional equipment such as optional extras and accessories which may have an effect on the power consumption (kW/100km) and range (km). Data are subject to change without any notice.

**Acceleration: 0-100 km/h determined with the declared maximum power. The maximum power is available at the highest possible battery state of charge and with an optimal operating temperature range of the high voltage battery.
